Projects

QuickBuy – A MERN Stack Shopping Website Live => [QuickBuy](#) | [Admin](#) | [GitHub](#)

Tools: React, Node, Express, MongoDB, Tailwind CSS

Description: E-commerce platform that enables users to browse, purchase, and manage products online while offering an intuitive and engaging shopping experience.

Responsibilities:

- Developed the front-end using React.js for a dynamic and responsive shopping interface.
- Built the backend using Node.js and Express.js to handle product listings, user authentication, and order management.
- Designed a scalable database with MongoDB to store and manage customer details, product information, and transactions efficiently.
- Implemented advanced search and filter features for users to find products easily.
- Added a review system, allowing users to rate and review products, enhancing customer engagement and trust.
- Created a clean, user-friendly design with Tailwind CSS to enhance the overall shopping experience across devices.

Portfolio Website

[Live Demo](#) | [GitHub](#)

Tools: React.js, GSAP, Email JS

Description: A personal portfolio website showcasing projects, skills, and contact information, designed to impress and engage.

Responsibilities:

- Developed an interactive front-end using React.js for a smooth user experience.
 - Implemented animations and transitions with GSAP to enhance visual appeal.
 - Integrated Email JS for seamless email functionality, enabling direct communication.
 - Ensured responsive design for accessibility across various devices and screen sizes.
- **Practice Project** – Mern Crud App, Digital Clock.
